

## Landscaping & Educational Play For Schools

### Welcome to Landform South West

#### Services Offered

We specialise in outdoor development at schools and nurseries. We listen to what the customer wants and then design around their requirements. We are aware of the desire of many teachers to encourage children to use the outdoors more in their cross-curricular activities. We can help them achieve this by providing natural play equipment which also forms an educational resource.

By undertaking an early site visit we can establish your exact requirements and see the area you wish to develop; then evaluate suitability before designing; so that your expectations are fully met.

Personal touch is important to Landform. When you speak to us, you will meet the people who design, make and build your requirements. We know that every piece of equipment needs to be unique – one size is not suitable for all, after all! We tailor-make equipment and shelters to fit the environment that they are to go in.

Landform provides a unique design, build and installation service; and enjoys the challenge of constantly creating bespoke equipment.

"From the design through to the completed garden, the whole process was exciting and imaginatively conceived. John and Leon instinctively understood our foundation phase outdoor learning philosophy and artistically transformed our derelict area into a garden to inspire and excite our children's curiosity.

All who see it are struck by the quality of real and lasting craftsmanship in the dry stone walls, the inspired choice of materials, especially the ancient wood and 4 million year old stones. This is much more than a garden, it's a proud legacy for the children."

**Mrs Vicky Meadows, Headteacher of Windsor Clive Primary School ,Cardiff**

## Landscaping & Educational Play For Schools

### Example Portfolio

#### Riverside Nursery, Tutshill, Chepstow, South Wales

The Nursery Staff wanted to provide the children with a staging area. We built a wooden Stage area using treated timber decking. The stage area was enclosed with wooden balustrade, to a height of approx. 1 Metre. Due to the gradient of the land, and some rocks which were already in this area, we were able to make a secret den underneath the stage. By enhancing the existing stones we formed a cave-like den; and then made a shaped decked floor, so that the children can use the den, whatever the weather. Naturally shaped Oak poles were used to support the stage area and form the entrance to the den below.

The new play area at Riverside Nursery has enhanced the facilities available to the children who attend it. Adventurous, safe play is now part of the daily routine and is, we are told, being thoroughly enjoyed by all.

#### Testimonials for Landform South West Ltd

"Landform listened to what we wanted from the very beginning; they designed a unique plan at a more than reasonable price. All work was completed within the specified time, despite complications on site out of their control.

The overall area has been totally transformed, to a very high standard of workmanship, I am sure it will leave a legacy for years to come. Most of all it has added to the children's experience of school, the memory of seeing their faces when they returned after the summer holiday will stay with me for a very long time."
